

# Blue Fin Boats

## Care of your carpeted timber floor

Your floors are made from a natural product and as such require regular care to keep them in as new condition.

The floors will be affected by different levels of humidity and temperature.

We ask that you follow these instructions.

- 1 The floors need to be washed with fresh water after use to remove dirt and or salt from the carpet.
- 2 Any hatches should be left open to allow air flow to assist in drying out the timber
- 3 The boat should be stored with the bow higher than the stern to allow the water to drain out of the bilge and to wick out of the carpet.
- 4 The carpet should be vacuumed when dry to remove sand and dirt.
- 5 The boat should be stored under cover or have a cover fitted after it is dry.
- 6 The timber and carpet floors warranty is limited to installation and does not cover the effects of weathering or wear and tear.

### Helpful Hint

Should your hatches warp slightly, due to the fact the timber may take time to cure and settle when new, you can press them flat when wet and allow them to dry weighted down.
